

Stat 305
Midterm 1

1. You have 110 minutes to complete the exam. Budget your time wisely, and be aware that some parts will take more time than others.
2. Unless indicated otherwise, each part (a, b, c, etc) is worth 5 points. There are 100 total points, including 20 free points.
3. Show all work involved in your calculations and explain your reasoning as indicated in the problems. Sentences should be clear, concise, and correct, containing only the most relevant information. Correct answers without justification will not receive credit.
4. You should use your calculator only to do basic arithmetic. You will need to show all work involved in calculations, including any statistical or distribution calculations. Numerical answers without proper justification will not receive credit.
5. If you can not answer part of a problem, but need its answer for a later part, just make up a *reasonable* value and use it. For example “I can’t do part (a), so I am going to assume that answer is 0.2 so I can do part (b).” This also applies to multiple steps within a single part and parts with non-numerical answers. An educated estimate is much better than no answer at all, but to get partial credit, make sure you explain your reasoning behind your estimate.
6. You are allowed to use
 - Calculator without internet access (no phones, devices, smart watches, etc).
 - Your notes sheet
 - Writing utensils
7. No other materials are allowed.
8. Consulting other students or sources and willfully providing information about exams to other students, *including students taking the exam at another time*, are both forms of academic dishonesty and will be prosecuted equally. Cheating in any way on an exam will result in a grade of 0 on the exam and your name will be forwarded to the Office of Student Rights and Responsibilities to permanently document your misconduct. Your grade in this course will be based on many components, and no single component carries undue weight. A problem or two on an exam is going to be worth a relatively small amount of your course grade. The risks of cheating aren’t worth it, so just don’t do it.
